# WAKOL MS 262 Parquet Adhesive, firm-elastic – ergonomic application for a smooth surface

## Specifically for adhesive applicators

WAKOL MS 262 Parquet Adhesive, firm-elastic has been developed for use with applicators. In particular, it has been designed to be easy to squeeze out, and unwanted dripping has been eliminated as far as possible. When you use WAKOL MS 262 Parquet Adhesive, firm-elastic you can be sure that you will achieve the best possible outcome when you lay parquet flooring with an applicator.

WAKOL MS 262 Parquet Adhesive, firm-elastic is available in 600ml, 1,800ml and 4,200ml sausages, which means it can be used in all standard applicators.

## Firm-elastic MS polymer adhesive for reliability and stability when laying parquet flooring

WAKOL MS 262 Parquet Adhesive, firm-elastic is a firm-elastic MS polymer adhesive that combines elasticity with strength. Its high inner strength enables it to more comfortably absorb any movement caused by expansion of the parquet flooring. Parquet flooring laid with firm-elastic adhesive has a smoother surface than flooring laid using standard elastic adhesive

## Can be used universally for virtually any relevant type of parquet flooring

WAKOL MS 262 Parquet Adhesive, firm-elastic is suitable for laying mosaic parquet, on edge lamella parquet, strip parquet, multi-layer parquet, solid wood planks as well as cork flooring with an HDF/MDF middle layer and cork stabilising layer on absorbent and non-absorbent subfloors indoors.

Although generally applied with an applicator, it goes without saying that WAKOL MS 262 Parquet Adhesive, firm-elastic can also be applied with a trowel blade. Suitable nozzles and trowel blades are available from Wakol.

## Connected Systems – the perfect match

WAKOL MS 262 Parquet Adhesive, firm-elastic is one of the products covered by the Loba and Wakol system guarantee. This means that WAKOL MS 262 Parquet Adhesive, firm-elastic and recommended Loba paints are compatible. No more worries about unwanted interactions between the products – we guarantee it!

## Less waste

When used in an applicator, the sausages make it easy to ensure that you squeeze almost every last drop out. This eliminates the tiresome, time-consuming task of scraping traces of adhesive from the bottom of your bucket. When crushed, the sausages occupy significantly less space in the waste bin than bulky stacks of containers.

The closed system in the sausages protects the remaining adhesive from moisture in the air in the building when you are working. Even when the packaging is opened, the surface of the product does not start to dry out or form a skin, which means that the adhesive you apply will always be fresh.

Please always observe the technical information before processing.
